Summary

4th-year Information Systems Engineering student with robust experience in the Software Development Life Cycle (SDLC) building web solutions and RESTful APIs. Experienced in architecting ERPs and business management systems, strictly adhering to SOLID principles and Clean Code. Highly proactive and passionate about leveraging emerging technologies, such as Generative AI, to optimize development workflows and deliver high-value business solutions.

Education

BEng **Universidad Tecnológica Nacional (UTN - FRT)**, Information Systems Engineering Tucumán, Argentina
• Currently in the 4th year of the 5-year degree program. Mar 2022 – present
• Focus on Backend Architecture and Software Development.

Experience

Albertus, IT Support & Software Developer Yerba Buena, Tucumán, Argentina
• Developed modern web solutions to optimize internal company processes using Laravel and Next.js. June 2025 – present
• Managed databases for the core legacy system, performing complex queries to ensure data integrity and accurate loading. 10 months
• Troubleshoot issues, resolved engineering escalations efficiently, and maintained IT infrastructure.

DevSol, Software Engineer Tucumán, Argentina
• Architected a custom management system (ERP) for a retail client, focusing on accurate inventory tracking and sales optimization. July 2025 – present
• Developed "Bronovios," an e-commerce platform, integrating external Payment Gateways and automated workflows. 9 months
• Functioned as an effective individual contributor within a cross-functional team to deliver products from inception to customer delivery.

Freelance, Software Engineer Remote / Tucumán
• Architected a custom Real Estate Management System (ERP) to digitize and scale operations previously managed in Excel, utilizing Laravel, Next.js, and MySQL 8. July 2024 – present
• Engineered complex financial logic to dynamically calculate rental installments, integrating an external API to fetch real-time economic indices (ICL/IPC). 1 year 9 months
• Implemented automated background tasks (Cron Jobs) running daily to audit and recalculate pending quotas, dynamically applying punitive interests, discounts, and extra charges upon payment execution.
• Designed a highly optimized relational database using advanced indexing strategies, alongside Layered Architecture and SOLID principles, ensuring clean code and robust data integrity across Tenant, Property, and Contract modules.

Projects

AI-Powered Personal Finance Tracker

Dec 2024 – present

Containerized automated expense tracking system via Telegram.

- Implemented the project's infrastructure using Docker to orchestrate local n8n containers, ensuring an isolated and reproducible execution environment.
- Designed an event-driven architecture to parse asynchronous transactions sent via Telegram messages (text and audio).
- Integrated Generative AI to categorize unstructured transaction data automatically and sync it with Google Sheets.

Skills

Backend & Architecture: PHP 8+, Laravel, MySQL 8 (Advanced Indexing), PostgreSQL, SOLID Principles, Clean Code, Design Patterns.

Frontend Development: React, Next.js, JavaScript, TypeScript.

DevOps, CI/CD & Testing: Docker, Git/GitHub, GitHub Actions (CI/CD Pipelines), Automated Testing (PHPUnit), Cron Jobs / Background Tasks.

Infrastructure & Methodologies: Agile (Scrum), IT Infrastructure, Event-Driven Architecture, API Integrations.

Spoken Languages: Spanish (Native), B2 Upper Intermediate
